The screenshot displays the Zita website homepage. The main content area features a navigation bar with links for home, entertainment, vrije tijd, nieuws, games, video, and win. Below the navigation bar, there are several content blocks: a video player for 'Aerosmith-zanger verrast straatmuzikant (video)', a game section for 'Speel het Bubbles game!', and a news section for 'Alweer besparingen bij VRT'. On the right side, there is a 'Telenet Webmail' login form, a weather forecast for 'vandaag' (today) and '09/09', and a large vertical advertisement for 'Euro Millions' with the headline 'VRIJDAG 11 SEPTEMBER' and '15 MILJOEN €'. The advertisement also includes a 'SPEEL NU' button and a small disclaimer at the bottom.

Delivering HTML5 As Hard material

Inside the <head> of the .html file a global JavaScript variable called “clickTag” must be declared.

Example:

```
<script type="text/javascript">
    var clickTag = "";
</script>
```

This variable must be used as landing page when processing the click.

A possible example:

```
<body style="margin:0;padding:0;">
    <a href="javascript:window.open(window.clickTag)">
        "INSERT YOUR CREATIVE DIV STRUCTURE HERE"
    </a>
</body>
```

Please deliver us the landings page by mail, our adserver will make sure the click command and landing page will be placed inside the clickTag variable.

Technical Specifications

Wide Skyscraper

Delivering HTML5 self hosted by a web service.

Inside the .html file the click command from our adserver must be picked up and placed in front of the landings page.
We will pass the click command in the URL via a query string called "click".

f.e

```
<iframe SRC="<YOUR BANNER URL>?click=<CLICK COMMAND>"></iframe>
```

Picking up the click command can be done with the following code.

```
var clickthrough = location.search.split('click=')[1];
```

Adding the variable clickthrough in front of you landing page will allow us to measure clicks in our adserver.

When using clickTag as variable to process the click, the entire code would become the following:

```
var clickthrough = location.search.split('click=')[1];  
var clickTag = clickthrough+"<YOUR LANDINGPAGE>";
```

Technical Specifications

Wide Skyscraper

Delivering HTML5 hosted in an ad serving system. (DCM – Adform – Sizmek - ...)

Please inform yourself how your ad serving system will process the click command.
Implement the clickTag as demanded by your system.

We will make sure our click command will be passed to the creative using the implementation guidelines of your ad serving system.
