HTML5

We strongly recommend the use of HTML5 but under the following conditions:

- CSS selector must contain banner specific prefix's.
- Must contain an IAB ClickTag and open the landing page in a new tab. (see following pages for extra information)

Video specifications:

Max 2.5mb, Up to 30 seconds, Longer than 30 seconds during user interaction. play, pause, stop, sound on/off button must be present.

Audio Specifications:

Standard audio off, only on with user interaction, on mouse off the creative, audio should stop. Sound on/off button must be present.

Delivering HTML5 As Hard material

Inside the <head> of the .html file a global JavaScript variable called “clickTag” must be declared.

Example:

```
<script type="text/javascript">
  var clickTag = "";
</script>
```

This variable must be used as landing page when processing the click.

A possible example:

```
<body style="margin:0;padding:0;">
  <a href="javascript:window.open(window.clickTag)">
    "INSERT YOUR CREATIVE DIV STRUCTURE HERE"
  </a>
</body>
```

Please deliver us the landings page by mail, our adserver will make sure the click command and landing page will be placed inside the clickTag variable.

Delivering HTML5 self hosted by a web service.

Inside the .html file the click command from our adserver must be picked up and placed in front of the landings page.

We will pass the click command in the URL via a query string called "click".

f.e

```
<iframe SRC="<YOUR BANNER URL>?click=<CLICK COMMAND>"></iframe>
```

Picking up the click command can be done with the following code.

```
var clickthrough = location.search.split('click=')[1];
```

Adding the variable clickthrough in front of you landing page will allow us to measure clicks in our adserver.

When using clickTag as variable to process the click, the entire code would become the following:

```
var clickthrough = location.search.split('click=')[1];  
var clickTag = clickthrough+"<YOUR LANDINGPAGE>";
```

Technical Specifications

Floorad

Delivering HTML5 hosted in an ad serving system. (DCM – Adform – Sizmek - ...)

Please inform yourself how your ad serving system will process the click command.
Implement the clickTag as demanded by your system.

We will make sure our click command will be passed to the creative using the implementation guidelines of your ad serving system.
